

How to improve Programming Logic

A big part of becoming a better programmer,

Is to become better at solving problems. **Here is how:**

Think to solve

Split the problem into smaller pieces. Focus now on solving these tiny pieces.

Take pen and paper

No one is clever enough to come up with the whole solution inside of their head. Write down & visualize.

Learn Algorithm & DS

They will help you to get clearer understanding of how to solve problems efficiently.

Read other's Code

Next time you copy code from

Stack- Overflow try to understand how the code you're copying works.

Learn Coding Paradigms

A paradigm is like a blueprint to follow to create projects. Also, understand functional programming.

WHICH POINT WILL YOU IMPLEMENT?
