

Project Prometheus

Project Prometheus: Core Generator Design - MAC 5000 Edition

This document outlines the full system schematic for the MAC 5000 generator, a magnetically-amplified free energy generator based on the Searl Effect and projected to run autonomously once initiated.

Core Objectives:

- Eliminate reliance on fossil fuels.
- Provide off-grid, self-sustaining energy to remote and underserved populations.
- Deliver modular, scalable units with zero dependency on centralized grids.

Key Components:

1. Magnetic Flywheel Core
2. Multi-Ring Roller Assembly
3. Rectification and Capacitor Storage
4. Lithium LiFePO4 Battery Integration
5. AC/DC Output Channels
6. Optional Electrostatic Boost Chamber (for gravity-assist model)

Open-source, non-commercial use encouraged. Built for the people, by the people.
