

ADS-B - A Boeing Perspective

ICAO ADS-B Seminar/Study & Implementation Task Force/11

Jeju, Republic of Korea

24-27 April 2012

William (Bill) Richards

Technical Fellow

Boeing Commercial Airplanes

Avionics/ Air Traffic Management

Agenda

Boeing Commercial Airplanes – Avionics / Air Traffic Management

- **ATS Landscape**
- **Standards/Certification**
- **US Activities**
- **Other Regional Activities**
- **Boeing Plan – ADS-B Out**
- **Boeing Plan – ADS-B In**
- **Airplane Architecture Considerations**
- **ADS-B In Symbology**
- **Equipage Levels**
- **Benefits**
- **Conclusions**

Air Transportation System Roadmap

2010

2015

2020

2025

2030

Airplane Population

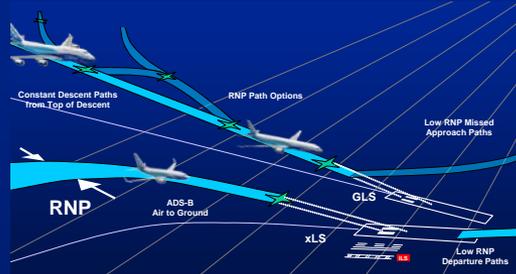

Airspace Operations

Manual ATC Intervention, Control by Radar & Navaid

Pre-Defined Performance Based Airspace

Dynamic Performance Based Airspace

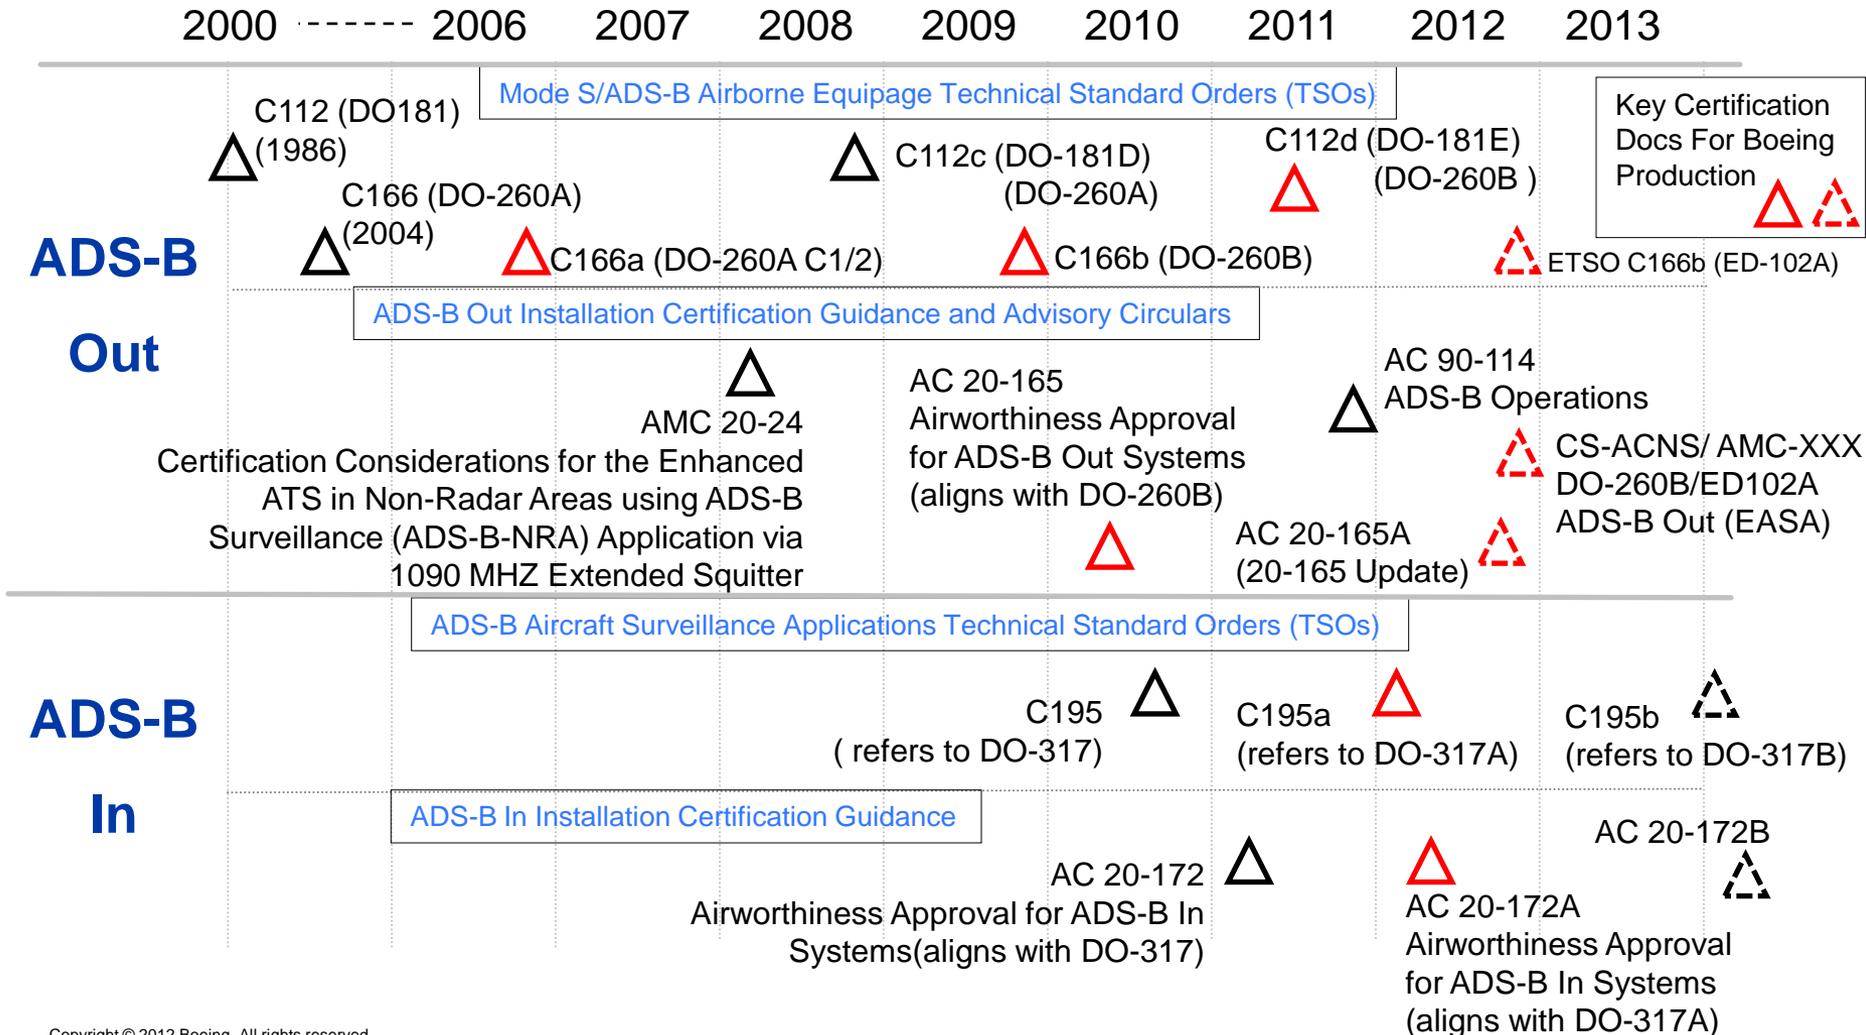

Key Capabilities

ATM Automation	Time-Based Arrivals	TRACON RPI	Extended TBFM	Surface Tool	Departure Tool	4D Trajectory Negotiation Tool
	Conflict Detection	Arr/Dep/Surf Data Integration	Time-based RNP/RNAV Arrivals	TRACON TBFM		4D Conflict Resolution
Communication	Analog Voice	Link 2000+				
	FANS-1	FANS-2		FANS-3		
	ACARS	Oceanic RCP		Continental RCP		
		Polar SATCOM	Broadband IP	Digital Voice	Future Subnetworks	
Navigation	GLS Cat I	GLS Cat III	Multi Freq / Constellation GNSS			Global Cat I from Space
	RNP	RNP AR	Expanded Windfield	Advanced RTA		
	Full Profile RTA	AMM	Graphical WX	Graphical Taxi	GNSS Backup System	
Surveillance	Extended Squitter	ADS-B In/CDTI	Spacing	ACAS/ADS-B Integration		Self Separation
	Prim / Sec Radar	ADS-B Out DO260B		SURF IA	Adv ADS-C	
	ADS-C	ACAS 7.1		Delegated Separation		
System Wide Information Management	OLDI	ETMS	AIDC	RADNET	Adv Inter-Facility Coord	Shared Trajectory & Surveillance Info
					Aero/Met Info	

Certification Documents

Boeing Commercial Airplanes – Avionics / Air Traffic Management

US/FAA Activities

Boeing Commercial Airplanes – Avionics / Air Traffic Management

- **ADS-B Out mandate for Class A, B, C airspace and Class E airspace (≥10Kft MSL) effective 1 Jan 2020 (FAR 91.225/91.227)**
 - Requires new transponder standard (DO-260B)
 - Requires update to GPS sensor with a minimum of SA Aware
 - Future update of AC 90-114 will likely require use of a service availability prediction tool (SAPT) to determine the ability of the positioning source (GNSS) to meet the position accuracy and integrity requirements for flight plan route
- **FAA-sponsored ADS-B In trials**
 - Merging and Spacing (UPS/Louisville - complete)
 - First validation of flight deck based Interval Management using EFB and auxiliary displays
 - Surface with Indications and Alerts (SURF IA - complete)
 - Provided operational performance evaluation on airport surface with final approach/runway occupancy alerting
 - In Trail Procedure (ITP - 2012)
 - Provide operational benefits in non-surveillance airspace
 - Validate operational performance and economic benefits
 - Flight Deck Based Interval Management-Spacing (FIM-S - 2012/13)
 - Reduce fuel burn, noise and emissions while maintaining high throughput
 - Develop and validate flight deck technology to enable FIM-S operations
- **FAA & NASA Interval Management operational evaluations planned (2015/16)**

Other Regional Activities

Boeing Commercial Airplanes – Avionics / Air Traffic Management

- **Nav Canada providing preferential services to ADS-B Out equipped a/c over Hudson Bay between FL350 and FL400 inclusive (initiated Nov 2010)**
 - Current production transponder meets mandate (EASA AMC 20-24 certification basis)
 - Elementary/Enhanced/Extended Squitter (ELS/EHS/ES) surveillance capability with AFM Update
 - Installed on Boeing production airplanes since early 2004
 - Service bulletins available for retrofit of in-production models
 - Starting 20 Oct 2011 non-equipped a/c must file for fixed route
- **European Commission completed an Implementing Regulation on 22 Nov 2011 mandating ADS-B Out in production on 8 Jan 2015 and for entire European airspace (retrofit) on 7 Dec 2017**
 - Requires transponder update to DO-260B standard
 - Need timely publication EASA Certification Specification (CS-ACNS) and AMC/ETSO
 - No requirement for ground systems to use ADS-B Out
- **Australia (CAO 20.18, Amend Order No. 3, dated Dec. 2009)**
 - Mandates ADS-B Out for upper airspace (\geq FL290) in Dec 2013
 - Current production transponder meets mandate (AMC 20-24)
 - SA-Aware GNSS receiver mandated in production starting 8 Dec 2016
 - Honeywell RMA-55B Multi-Mode Receiver is not SA-Aware and will not be modified to SA-Aware

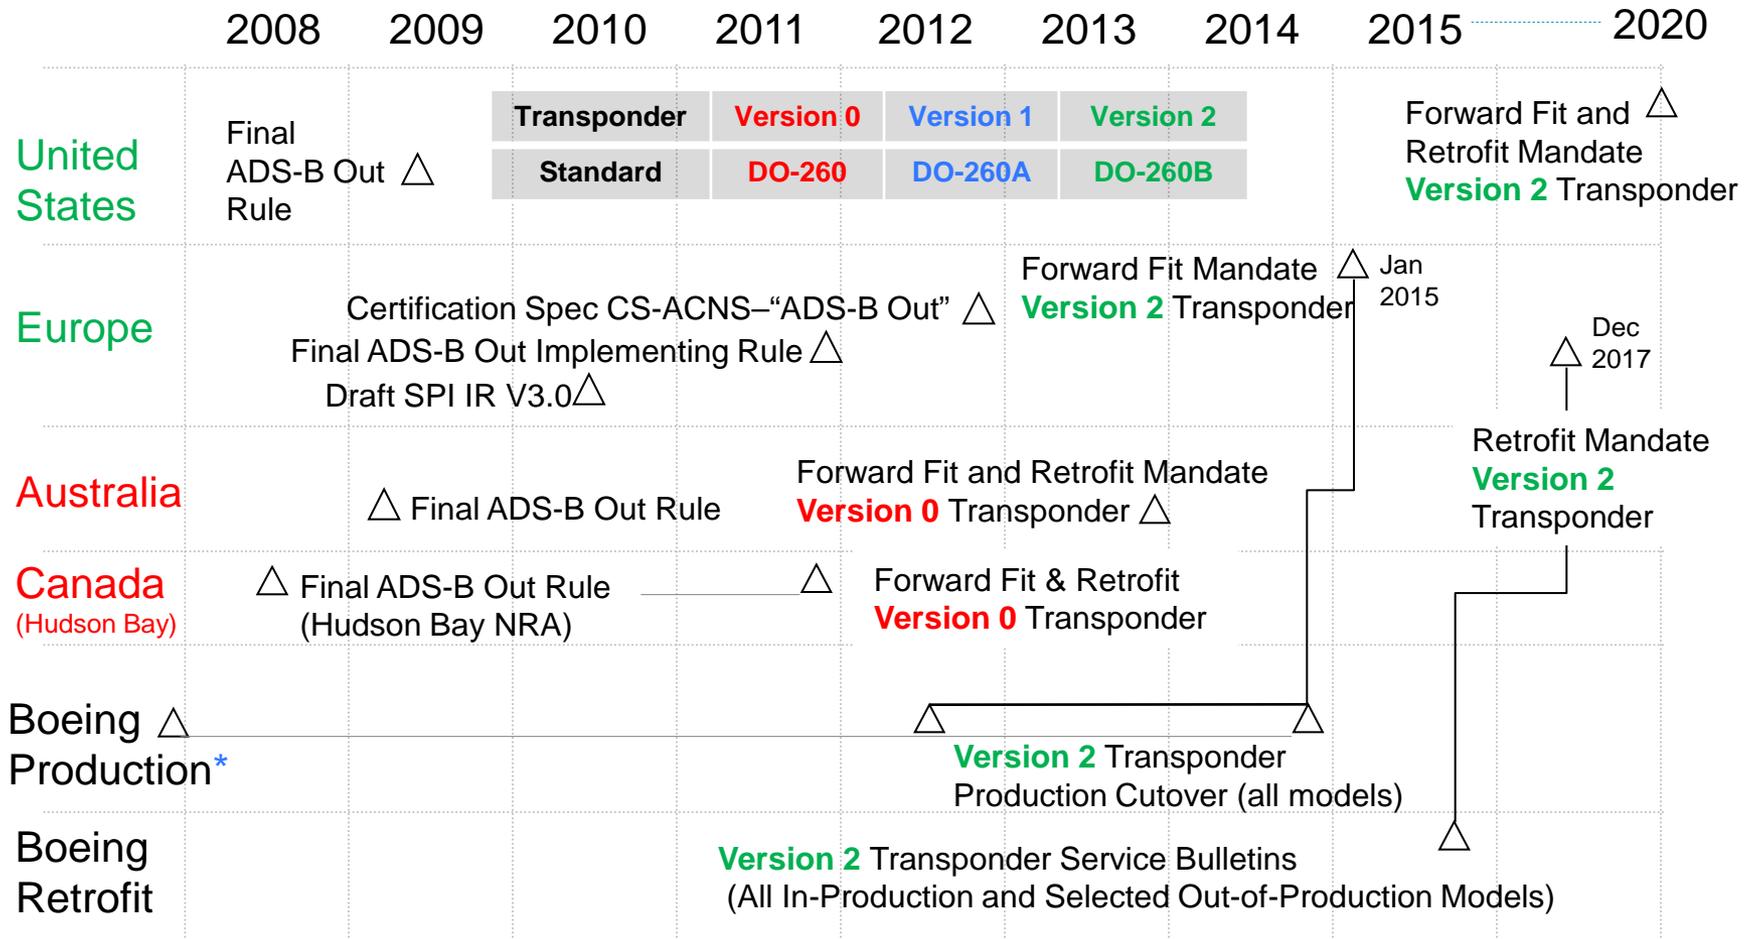

Other Asia Region Activities (known)

Boeing Commercial Airplanes – Avionics / Air Traffic Management

- Hong Kong (Airworthiness Notice 102F, Issue 2, 28 Feb 2011)
 - Implement the use of Automatic Dependent Surveillance Broadcast (ADS-B) Out:
 - After 31 Dec 2013 for aircraft flying over PBN routes L642 or M771 between FL290 and FL410
 - After 31 Dec 2014 for aircraft flying within Hong Kong FIR between FL290 and FL410
 - Must meet DO-260 (Version 0) requirements of ICAO Annex 10 and ICAO Doc 9871 Chapter 2, or DO-260A (Version 1) requirements of ICAO Doc 9871 Chapter 3
 - Means of compliance per EASA AMC 20-24 or CASA CAO 20.18 Appendix XI
 - Current Boeing production equipage meets requirements
- Singapore (CAAS AIC 14, 28 Dec. 2010)
 - Implement the use of Automatic Dependent Surveillance Broadcast (ADS-B) Out after 12 Dec 2013 within certain parts of the Singapore FIR (\geq FL290)
 - Must meet EASA AMC 20-24 or CASA CAO 20.18 Appendix XI, otherwise must fly at $<$ FL290
 - Current Boeing production equipage meets requirements
- Other Asia Pacific Regulatory Agencies
 - Expected to follow ADS-B Avionics Requirements template per APANPIRG Conclusion 21/39
 - Template states: Must meet EASA AMC 20-24 or CASA CAO 20.18 Appendix XI

ADS-B Out – Meeting the Mandates

Boeing Commercial Airplanes – Avionics / Air Traffic Management

* 787-8 & 747-8 aircraft have Version 1 transponder and SA-Aware GNSS receiver since Entry into Service (EIS)

ADS-B Out – Version 2 ATC Transponders

Boeing Commercial Airplanes – Avionics / Air Traffic Management

- Planned Boeing in-production Version 2 (DO-260B) ATC transponder capability**

	737NG	747-8	767	777	787-8
Buyer Furnished Equipment (BFE)	ACSS (update to ATDL XS-950) Honeywell (TRA-100B) RCI (TPR 901)		ACSS (update to ATDL XS-950) Honeywell (TRA-100B) RCI (TPR 901)	ACSS (update to ATDL XS-950) Honeywell (TRA-100B) RCI (TPR 901)	
Supplier Furnished Equipment (SFE)		RCI ⁽¹⁾ (TPR 901)			RCI ISS ⁽²⁾

(1) Same unit as Buyer Furnished Equipment

(2) Integrated Surveillance System (ISS) includes ATC Transponder, ADS-B Out, ACAS/ACAS, Terrain Awareness, and Weather Radar

RCI – Rockwell Collins Inc.

BFE – Equipment selected/provided by buyer
SFE - Equipment basic to airplane

- All units planned to be certified to TSO C112d/C166b**
- Interfaces per ARINC 718A Supplement 4 (787 ARINC 768-2)**
- Installation compliant with requirements of AC 20-165**
- Need timely publication EASA Certification Specification (CS-ACNS) , AMC, and ETSO**
 - Currently planned for publication in 4Q 2012
 - AMC will be very similar to FAA AC 20-165 to be compliant with CS

DO-260B should be maintained as minimum ADS-B Out standard

ADS-B Out – Multi-Mode Receivers (MMRs)

Boeing Commercial Airplanes – Avionics / Air Traffic Management

Boeing in-production Multi-mode receiver (MMR) capability

	737NG	747-8	767	777	787-8
Buyer Furnished Equipment (BFE)	Honeywell (RMA-55B SA On) Thales (TLS-755 SA Aware) Rockwell (RCI) (GLU-920-001/002 SA On) (GLU-920-004 SA Aware) (GLU-925 SA Aware)		Honeywell (RMA-55B SA On) Thales (TLS-755 SA Aware) Rockwell (RCI) ((GLU-920-001/002 SA On) (GLU-920-004 SA Aware) (GLU-925 SA Aware)	Honeywell (RMA-55B SA On) Thales (TLS-755 SA Aware) Rockwell (RCI) (GLU-920-001/002 SA On) (GLU-920-004 SA Aware) (GLU-925 SA Aware)	
Supplier Furnished Equipment (SFE)		Rockwell ⁽¹⁾ (RCI) (GLU-925 SA Aware)			Honeywell INR ⁽²⁾

- All units certified to TSO C129a
- Interfaces per ARINC 755-3

- (1) Same unit as Buyer Furnished Equipment
- (2) Integrated Navigation Radio – SA Aware

BFE – Equipment selected/provided by buyer
SFE - Equipment basic to airplane

ADS-B In Development Plans

Boeing Commercial Airplanes – Avionics / Air Traffic Management

- Standards for some applications still under development
- Operational procedures for ADS-B In applications in trial phase
- Boeing goal to develop equipage architectures with growth capability
- Solution must provide economic/technically sound approach for our customers
- Prototyping ADS-B In/ CDTI displays and guidance in FFOV
- Flight deck human machine interface requirements near completion
 - Symbology and displays
- Research and feasibility studies on-going:
 - Traffic processing requirements in work
 - Targeting initial set of situational awareness applications
 - Retrofit solutions for out-of-production models in review
 - Evaluating auxiliary display solution/certification requirements for retrofit

Plans for ADS-B In/CDTI are in work

ADS-B In – Traffic Processing

Boeing Commercial Airplanes – Avionics / Air Traffic Management

- Planned Boeing In-Production traffic processing function in ACAS LRU

	737NG	747-8	767	777	787-8
Buyer Furnished Equipment (BFE)	ACSS (TCAS 3000 SP) Honeywell (TPA -100C) Rockwell (RCI) (TTR-2100)		ACSS (TCAS 3000 SP) Honeywell (TPA -100C) Rockwell (RCI) (TTR-2100)	ACSS (TCAS 3000 SP) Honeywell (TPA -100C) Rockwell (RCI) (TTR-2100)	
Supplier Furnished Equipment (SFE)		RCI ⁽¹⁾ (TTR-2100)			RCI ISS ⁽²⁾

(1) Same unit as Buyer Furnished Equipment

(2) Integrated Surveillance System (ISS) includes ATC Transponder, ADS-B Out, ACAS, Terrain Awareness, and Weather Radar

BFE – Equipment selected/provided by buyer
SFE - Equipment basic to airplane

- All units will be certified to TSO C195a
- Interfaces per ARINC 735B Supplement 1 (787 ARINC 768-2)
- Installation compliant with requirements of AC 20-172a

Plans for ADS-B traffic processing are in work

Architecture Considerations

Boeing Commercial Airplanes – Avionics / Air Traffic Management

Function	737NG	747-8	767	777	787-8
Traffic Computing	Single ACAS LRU	Single ACAS LRU	Single ACAS LRU	Single ACAS LRU	Dual ISS ⁽¹⁾
CDTI	ND	ND	ND	ND	ND
Aircraft Interfaces	FMC/MMR/ADIRU	FMC/MMR/ADIRU	FMC/MMR/ADIRU	FMC/MMR/ADIRU	FMF/INR
Guidance (speed/dist)	ND	ND	ND	ND	ND
Crew Controls	MCDU/TBD	MCDU/TBD	MCDU/TBD	MCDU/CCD	MKP/CCD

(1) Integrated Surveillance System (ISS) includes ATC Transponder, ADS-B Out, ACAS, Terrain Awareness, and Weather Radar

Plans for ADS-B In Integration are in work

CCD – Cursor Control Device
 FMF – Flight Management Function
 INR – Integrated Navigation Radio
 LRU – Line Replaceable Unit
 MCDU - Multi-function Control & Display Unit
 MKP – Multi-function Key Pad
 ND – Navigation Display

Forward fit of ADS-B In/CDTI targeted for forward field of view display systems

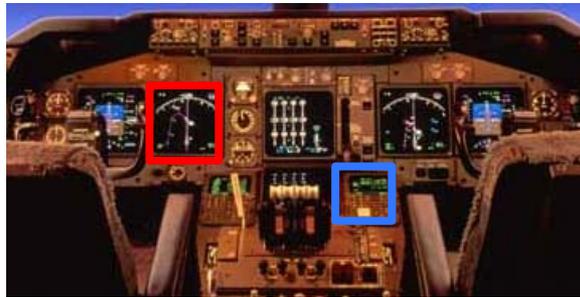

Flight Deck Considerations

Boeing Commercial Airplanes – Avionics / Air Traffic Management

737

747

767

Display System upgrade is Required

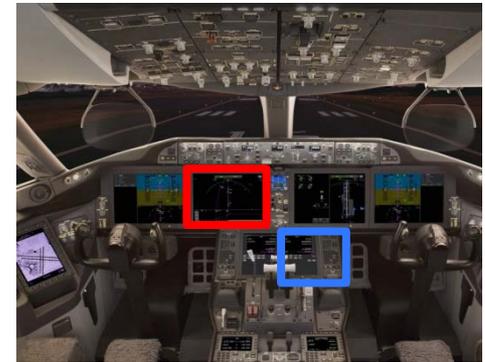

777

Plans for ADS-B In Integration on the flight deck are in work

787

Display

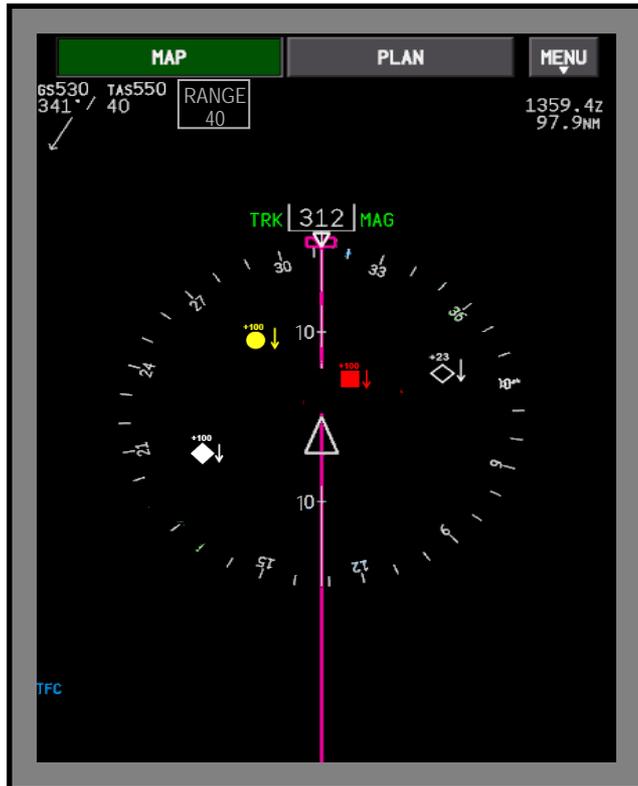

Control

Forward fit of ADS-B In/CDTI targeted for forward field of view display systems

New ADS-B In Symbology

Boeing Commercial Airplanes – Avionics / Air Traffic Management

Baseline Design

Legacy ACAS Traffic Symbol Set

Proposed Design Changes

ADS-B Traffic Symbol Set

ADS-B In integration with ACAS in the flight deck required for long term while maintaining underlying independent ACAS collision avoidance function

Plans for ADS-B In symbology are in work

New ADS-B In Symbology

Boeing Commercial Airplanes – Avionics / Air Traffic Management

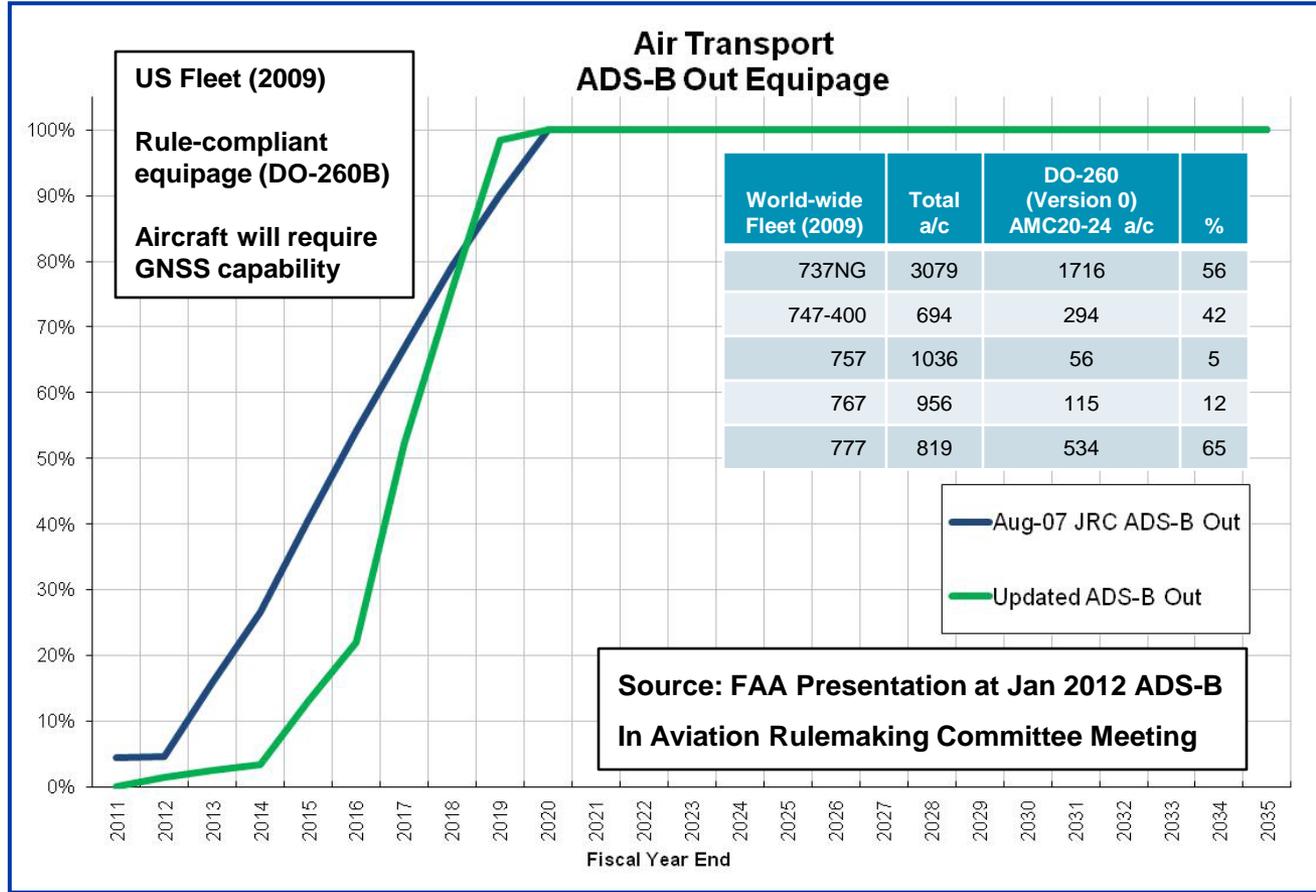

ADS-B Surface Traffic Symbology

Plans for ADS-B In symbology are in work

ADS-B Out Equipage Growth

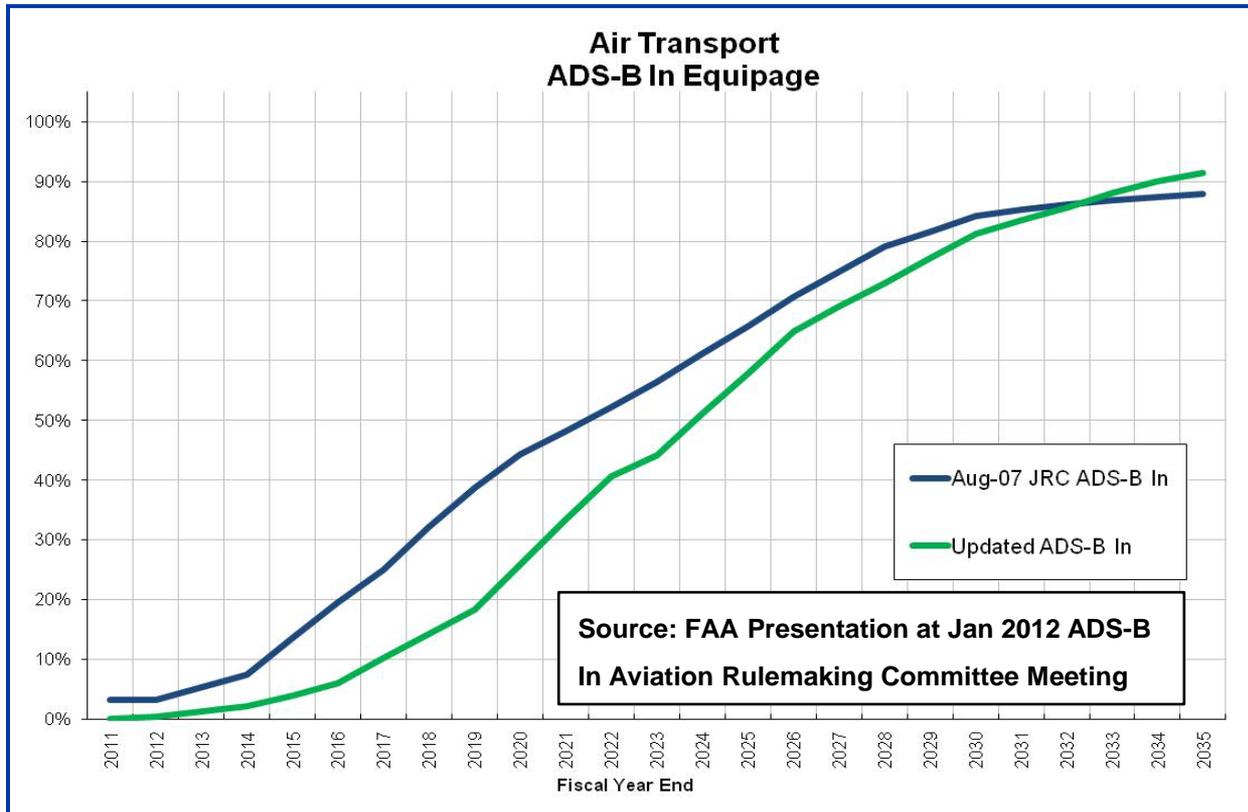

Boeing Commercial Airplanes – Avionics / Air Traffic Management

DO-260B equipage for aircraft operating in the US will grow to 100% by 2020

ADS-B In Equipage Growth

Boeing Commercial Airplanes – Avionics / Air Traffic Management

Retrofit of the existing fleet for ADS-B In and CDTI is key to gaining high equipage penetration levels required to support significant ADS-B In operational benefits

Benefits

Boeing Commercial Airplanes – Avionics / Air Traffic Management

- **ADS-B Out provides a low cost ground surveillance alternative to radar**
 - Reduced air navigation service provider costs
 - Provides radar-like separation or better
 - Requires new airplane functionality for most aircraft in the existing fleet (Transponder/GNSS receiver)
- **ADS-B In provides increased operational efficiency and capacity**
 - Business case will be demonstrated through operational evaluations
 - Operators need to see reasonable return on investment (~3yr payback period)
 - In Trail Procedure (ITP) and Interval Management applications most likely to provide early benefit
 - Benefits will be required with mixed ADS-B In equipage
 - Retrofit of existing fleet will be key to gaining early benefits
 - Operators will drive need for ADS-B In features on production aircraft
 - Operators desire bundled applications with consistent flight deck interfaces
 - Production a/c architecture must support growth capability for advanced applications

Conclusions

Boeing Commercial Airplanes – Avionics / Air Traffic Management

- Meeting production/retrofit mandates for ADS-B Out
- Developing ADS-B In solutions which maximize value of equipage
 - Conducting forward fit studies targeting primary field of view to ensure cost-effective architectures with growth capability
 - Evaluating retrofit solutions including auxiliary displays
- Coordinating with Air Navigation Service Providers (Canada, Australia, Europe, US, others) to ensure common airborne requirements global harmonization
- Engaging with airlines and industry partners on rulemaking around the world
- Continuing industry standards support
- Boeing Aero Magazine Article on ADS-B:
 - http://www.boeing.com/commercial/aeromagazine/articles/qtr_02_10/2

**Boeing is actively engaged in ADS-B development,
a key capability for improved airline operations**
