UNITED STATES BLUEPRINT BUDGET

A Policy Framework to Strengthen Growth, Stabilize Debt, and Eliminate Shutdowns

1. OVERVIEW

This Blueprint Budget establishes a fiscal strategy for the United States that realigns national priorities toward long-term prosperity, energy independence, and technological leadership. It replaces reactive crisis budgeting with strategic planning based on automatic stabilizers and transparent fiscal management.

2. FISCAL TARGETS

• Revenues increase gradually to 20.5% of GDP by FY2035 via base-broadening and anti-evasion reforms.
• Outlays decline modestly from 21.0% to 20.1% of GDP as health, defense, and interest costs are optimized.
• The deficit narrows to roughly 0% of GDP by 2035.
• The debt-to-GDP ratio falls from 97% to 85% over ten years.

3. POLICY STRUCTURE

The Blueprint integrates with the Government Operations Continuity and Stability Act (GOCSA), guaranteeing uninterrupted operations, transparent appropriations, and permanent protection from future shutdowns. It introduces a permanent automatic continuing resolution mechanism, debt alignment, and a stabilization reserve for disasters and cyber events.

4. REVENUE STRATEGY

• Harden the 15% corporate minimum tax and close offshore loopholes.
• Implement a carbon dividend program returning household rebates.
• Apply a micro financial-transactions levy to stabilize markets and fund oversight.
• Strengthen IRS modernization and compliance enforcement.
• Eliminate inefficient or redundant tax expenditures via ten-year sunsets.

5. EXPENDITURE PRIORITIES

• Protect Social Security, Medicare, and Veterans' benefits.
• Expand value-based healthcare and accelerate generic drug access.
• Maintain defense readiness with reformed procurement and allied cost-sharing.
• Invest in R&D;, AI, and infrastructure for domestic manufacturing and clean energy.

6. STRUCTURAL REFORMS

• Biennial budgeting cycle beginning FY2027.
• Automatic debt-ceiling alignment to authorized spending.
• Transparent OMB dashboards with weekly fiscal updates.
• Member pay escrow and accountability under the 27th Amendment.

7. MACROECONOMIC OUTLOOK

Under this plan, average real GDP growth stabilizes near 2.3%, inflation trends toward the 2% target, and labor participation improves via public-private reskilling initiatives. Interest costs decline after FY2029 as primary surpluses emerge.

8. CONCLUSION

This is a budget that works *for* America rather than against it — disciplined, transparent, and forward-looking. It ensures our government never shuts down again while investing intelligently in the future of its people.
