

~~SECRET~~ NOFORN - SKEET CHANNELS ONLY

PROJECT SUN STREAK (U)

ERV SESSION PROCEDURES REPORT

WARNING NOTICE: INTELLIGENCE SOURCES AND METHODS INVOLVED

CONTROL NUMBER: N-1 NICKNAME: None
DATE OF SESSION: 29 Sep 87 TARGET COUNTRY: N/A
REFERENCES: None SESSION NUMBER: 03
DATE OF REPORT: 30 Sep 87 MISSION STATUS: Closed
TECHNIQUE UTILIZED: ERV SOURCE IDENTIFIER: 003

1. (S/NF/SK) INTERVIEWER TASKING: Project N-1 is the first of five similar projects (N-1 through N-5), in which the Viewer will be tasked to describe in detail a document that is being maintained in the DIAC. In a previous session Source had reported in detail the data pertaining to "a document" and therefore it was presumed that the information was, in fact, relevant to the target document. In this session the Interviewer was tasked to continue to gather specific data pertaining to the document so that a qualitative analysis of His information can be made. The Interviewer remained unwitting as to the actual content of the document.

2. (S/NF/SK) SOURCE TASKING: Source was told only that this was a continuation of a previous session in which He had been tasked to report on a specific document located within a specific building. Source was told that this session, unlike the previous session, would be conducted utilizing the Extended Remote Viewing (ERV) technology and therefore a re-reading of the encrypted coordinates would be given as a cue. No other descriptive data or cuing was given to Source prior to this session.

3. (S/NF/SK) INCLEMENTENCIES: There were no reportable incidents or anomalies which may have influenced the data obtained in this session. Source was not told until just prior to the beginning of the session that He would be tasked utilizing the ERV technique vice the Coordinate Remote Viewing technique in which Source had been previously trained. This slight bit of "mystery" was handled by Source without any noticeable hesitation or reporting problems.

4. (S/NF/SK) SUMMARY: Source furnished the attached summary which was prepared following the session and submitted to the Interviewer

~~SECRET~~ NOFORN - SKEET CHANNELS ONLY

within 24 hours after the session. The completeness of the typewritten summary has been compared to the Interviewer's notes and all omissions, changes, and/or corrections have been verified as acceptable by the Interviewer. The information provided in the summary was found to be complete and did not require further modification, clarification or additions by the Interviewer.

5. (S/NF/SK) COMMENTS: Source was quickly able to reacquire the "signal line" as promised and reported data pertaining to the document after He was tasked to do so. The data reported pertaining to this document seemed to complement His previous impressions of a contingency planning document as opposed to any type of technical journal or manual.

SG1J

GS-13, DAC
Interviewer

Site involves a large, grey building, with both flat and rounded components and a partly sloping roof. There are numerous cars, pavement, grass, open areas, and other structures in the vicinity of this one building. A large, rather dirty, brackish body of water is somewhere nearby. The area in which the building is located is cut off from normal contact, both physically and administratively. The entrance to the structure is through glass doors; around the doors it is shiny, hard, lines in the walls, and darker colored than the rest of the building.

[Inside the building in the special area where the document of interest is located]

There is a metal door, tables and chairs; tables have shiny tops, chairs are somewhat scattered around from where they are supposed to be. This is a place where you keep track of things. There are objects here that remind me of safes--big, iron, grey, hard, heavy.

[focus on document]

White, a few pastel colors of paper. Seems to be around 20-25 pages in length. The title of the document deals with directions, guidance--pre-set guidance for situations--it's not as useful as it used to be things. Some things are overcome by events. It seems like it has at least partly to do with some sort of equipment, hardware of some sort. First part of the document is historical, general in nature; second part is imaginary and kind of fictional, like it hasn't happened yet: "What if...?" The next portion has something to do with resources, things to be used, general terms, where they are supposed to be, what they control, overlapping to avoid gaps. Next portion has tables of items, of things--divided into groups, orderly and neat sort of fashion. The tables talk about equipment, hard things, things that can move; they're resources. The next section is some sort of summation, or restating--"closing the loop."

[person responsible for preparing document]

This person is relatively tall, knows what's going on; he has expertise but not as lively now--wears glasses, hair kind of receding. The subject matter of his document involves plans, coordination between agencies/groups. Brief image of things being mashed up and put together in a new form. The single most important item in the document may be a date, as when something may be slated to happen--a pivot point; the date is fixed, but the events are not. If they occur, contingencies go into effect; if not, other courses of action are taken. It's all kind of speculation. If it goes one way, there will be all kinds of movement--an organization specified in the document goes into effect. Other candidates for most significant items in the document include the criteria for decision making--what it takes to decide to put it into effect.

[pictures]

At first no illustrations or pictures noticed. Now an impression of black and white satellite or other overhead imagery, with annotations and circles indicating critical points. Some possible letters perceived on the front cover of the document are P,R,S,K,E,U,T,N,C. This document is restricted-- access to it is limited to only a few people. It seems to have a classification equivalent to top secret.
