port and
packaged

South of a large, vertical round, smooth, grey structure, is a very wide, long, low broad structure in a large, open, semi-restricted area. This item may be coated with a protective, black, tacky substance "like tar". ~~The item is~~ ~~the~~ The item is constructed with a thin, hard, metal casing, under which is a spongy, composite material, "like high-tech insulation," then a narrow empty space, then a supporting structural framework, then a huge, mostly empty volume of space, which smells very strong & pungently. Volume is only partly filled with a fluid that is not necessarily beneficial to biological systems, but is used for something. It is extracted from one end of the structure through a long, thin, round thing (pipe?), then is loaded into something that transports it, to where it is distributed, ported, & packaged.

Carbon

①.

Step 7

Fluorene

~~Organic~~ ~~clotted~~
~~Organic~~ ~~clotted~~ chemicals
(ie $H_2 + O_2$) associate
w/ Carbon, but a "wild card"
is involved as well, which is
where "fluorene" came from

Nitrogen may also be involved
