There has been a system in place and evolving for over 30 years. It's organizational genesis and agenda is spelled out HERE. This article shall address some of the methods used to accomplish its goals.

Until recently, stealth was paramount because data was being collected and no reasonable means of disseminating it was available. The SecureDrop fiasco illustrates the problem, there is no need to go further on that issue.

The Wikileaks situation is also illustrative of the publishing problems. Some are quite willing to sacrifice like Seth Rich in order to get information out, but since the MSM is controlled, the outcome does not justify the risk.

The phenomenon centered around Q has negated some of the media blockages and it was felt that risking a White Rabbit might be beneficial. Even if Q were not legit, the chance of benefits through the crowdsourcing approach that emerged seemed reasonable, so a "latching" campaign was fostered.

I was chosen as the messenger because my cover was already blown as a member of the PINK BUNNIES decades ago (among certain entities). Also, I have electronic surveillance training, webmaster skills, audio/visual capabilities, writing skills, generalized knowledge, and history that fits the bill. Like Haymitch of The Hunger Games, I have done battle with both the adversary and my own vices, valuable experiences that prepared me for these times.

Getting to methodology, the organization considers all forms of data delivery utilizing the internet insecure. Important data is kept off the grid, tempest proof systems are used. Couriers and drop sites rather than online transfers. When speed is necessary, steganography and strategy allow faster comms. A code system was developed that forces adversaries to use human resources.

The code interweaves with Bible texts, songs, videos, sermons, and expository commentary. Secular material also, when it communicates truth. From movie plots to pop music, memes,

themes, and scenes, thus exposing serious adversaries to truths that potentially convert them. Some renounce their previous employers and they lose personnel. Some even remain where they are, helping us as double agents, even climbing the enemy ranks as deep moles.

Since jumping aboard the QANON train, a "boot camp" of sorts was established to teach our philosophy and methods - BOOT CAMP.

Contact was attempted with various internet personalities, a "testing of the waters" as it were. I have received word that the time for games and training is rapidly coming to an end. A massive data drop which will end the Vatican and its cronies in governments worldwide will soon be released. All those who wish to be part of the disseminating and publishing of this info should prepare.

If you wish to participate in the takedown of the global center of corruption and pedophilia, then take the "Bootcamp" course linked above. Understand the risks, then take the time to install a couple of free programs to do basic steganography (linked for your convenience). Some training files are provided in this manner to keep out kids and the uncommitted. If you are serious or are a pro working with an agency, you are given just enough to know the system is real.

SS members are chosen, no one gets in uninvited. Only when the IFF coding is revealed will you become part of the team. Until then, you can contribute to the broadly defined mission through external efforts. We are hoping to have some help with the data drop since it is currently a suicide mission. Still, it's a mission we will be happy to complete (with or without help) and it is doable, in fact, it is unstoppable.

We are willing to take heavy losses to liberate the suffering and the trafficked. Spend your time on local politics if you wish, we are taking down the pedo palace in Rome. Click **HERE** if you wish to participate.
